Establishing a Web Site

Builder Exercise

Building Activity-Establishing a Web Site

In this activity you will learn how to create a simple Web site and upload it to Github. Github provides web servers for free for 1 website. People commonly use this as a personal home page or portfolio site.

To Do

Follow the instructions in this exercise to create two files on your UW web server. When your files are on the UW server, you will be able to click the links below and see them.

- <https://ruolanh-1930795.github.io/index.html> is your first HTML page for INFO 101.

When you are satisfied with the files you have submitted, click the button below to certify that your files are uploaded.

Links certified. Click to uncertify

A [Git](#) is a [version control system](#) that facilitates teams working on the same code at once.

GitHub is the most popular Git. It's a "hub" where you can store [open sourced](#) code and collaborate on ideas both big and small.

GitHub a great tool to share your projects with others (job recruiters, friends, family, etc.). The Web Site you built for Info 101 starting today can become your portfolio. Also, if you go on to take more Informatics classes, participate in hackathons, or work on independent projects, the GitHub skills you learn will really help you!
